Professional Summary

Results-driven **Data Scientist & Generative AI Engineer** with nearly **3 years of experience** delivering AI/ML and GenAI solutions. Specialized in **LLM integration, RAG pipelines, Agentic AI systems**, and FastAPI-based microservices. Hands-on expertise in LangChain, **OpenAI GPT, Hugging Face, ChromaDB**, and **Azure cloud** deployment using **Docker**. Experienced with **Redis** caching, **Azure DevOps pipelines**, MLflow, and GitHub Actions for CI/CD. Skilled in designing scalable, production-ready AI chatbots, intelligent retrieval systems, and data-driven applications.

Education

- Maharana Pratap Engineering College, Kanpur (AKTU), India — B. Tech, Computer Science & Engineering (2020–2023) | CGPA: 7.2
- Government Polytechnic Kanpur, India — Diploma in Textile Technology (2017–2020) | Aggregate: 68%
- SVM Inter College Fatehpur, India — Class XII (UP Board, 2016–2017) | 85%
- AJI Inter College Fatehpur, India — Class X (UP Board, 2012–2014) | 86%

Professional Experience

Data Scientist – Unimrkt Response Pvt. Ltd.

Gurugram, India | July 2025 – December 2025

- Developed a **RAG-based Agentic AI Chatbot** for Unimrkt's enterprise product for intelligent customer support and data retrieval.
- Created and deployed scalable Chatbot APIs using **FastAPI** with **Docker and Azure App Services**.
- **Integrated Redis caching** for optimized session handling and faster response generation.
- Built **Azure DevOps pipelines for CI/CD** with environment segregation for dev and prod deployments.
- Used **ChromaDB** for vector storage and similarity search, trained models on cleaned FAQ and customer email datasets.

- Applied advanced **prompt engineering** to enhance contextual understanding and accuracy.
- Collaborated with cross-functional teams for API deployment, database design, and feedback integration.

Tech Stack: LangChain, OpenAI GPT, FastAPI, Azure, Docker, Redis, ChromaDB, Python, SQL, Azure DevOps, Git, GitHub

Data Scientist – Ma Durga Enterprises

Remote | July 2024 – May 2025

- Built an **AI-powered Enterprise Knowledge Assistant** for internal teams enabling automatic document understanding, retrieval, and summarization.
- Designed **custom RAG workflows** using LangChain + ChromaDB optimized for large multi-department document repositories.
- Fine-tuned **LLaMA & Mistral models** on domain-specific internal knowledge bases for improved contextual accuracy.
- Developed **workflow automation scripts** for PDF parsing, metadata extraction, and data cleaning pipelines using Python + Azure Functions.
- Implemented **role-based access retrieval** for sensitive documents using JWT authentication + FastAPI middleware.
- Integrated **OpenAI, Gemini, and Together AI** into a unified abstraction layer enabling model fallback & cost-optimized inference.
- Designed internal dashboards for **usage analytics, retrieval accuracy tracking, and latency monitoring** using Streamlit + MLflow.
- Collaborated directly with business teams to convert manual workflows into **AI-assisted pipelines** for measurable productivity gains.

Tech Stack:

LangChain, ChromaDB, LLaMA/Mistral, OpenAI, Gemini, Together AI, FastAPI, Azure app service, Python, MLflow, Docker, Streamlit, JWT Auth, Azure DevOps, CI/CD

Data Analyst – BotexAI Pvt. Ltd.

Delhi, India | September 2022 – June 2024

- Developed LLM-based internal tools for document retrieval, summarization, and FAQ generation.
- Designed RAG pipelines using LangChain, ChromaDB, and Hugging Face Transformers.
- Integrated **OpenAI GPT, Gemini, and Together AI models** for context-aware generation.
- Automated testing and deployment workflows with **GitHub Actions and MLflow**.
- Worked with enterprise clients to deploy AI-driven solutions for large-scale use cases.

Selected Projects

SurveySenseAI – AI Agent–Powered Customer Support Assistant

A multi-agent customer support system that intelligently classifies user queries into **Generic (FAQ-based)** and **Specific (account-related)** categories.

- Uses dual agents to handle general FAQs and account-specific questions with secure context handling.
- Powered by **LangChain, ChromaDB, FastAPI**, and models from **OpenAI, Gemini, and Together AI**.
- Performs semantic search, summarization, and accurate response generation using an agentic RAG workflow.
- Designed for scalable, real-time customer support automation.

RAG-Powered Hotel Management Virtual Assistant

An intelligent assistant to help enterprises search, summarize, and interact with internal documents using LangChain, ChromaDB, and FastAPI. Integrated OpenAI, Together AI, and Gemini models for robust document understanding and retrieval.

Acko Medical Voice Assistant

An AI-powered real-time voice transcription and reflexive question generator designed for Medical Examination Reports (MER) in health insurance underwriting. Built during the ACKO hackathon to improve doctor-patient interaction quality.

- Real-time bilingual (Hindi + English) transcription with Indian accent support.
- Context-aware question generation and medical insight extraction.
- Sentiment and risk analysis with real-time priority tagging.
- Multi-day session memory with Firebase integration for context persistence.
- Deployed on web using React + Firebase + Gemini API with responsive medical UI.

Technical Skills

Programming: Python (Pandas, NumPy, Scikit-learn), SQL, MongoDB

AI/ML: LangChain, Hugging Face, OpenAI (gpt-4o, gpt-3.5-turbo), Gemini (gemini-2.5-flash), LLaMA/Mistral, RAG Systems, Prompt Engineering

Agentic AI: Langchain Tool, Agents, Multi-Agent Orchestration, Context-Aware Workflows

Databases: ChromaDB, Redis (Caching),

Cloud & DevOps: Azure (App Service, ACR, Pipelines), AWS, GCP (Vertex AI), Docker, MLflow, GitHub Actions

Frameworks: FastAPI, Streamlit, React

Leadership & Open-Source Contributions

Project Lead – Girl Script Summer of Code (GSSoC'23, '24, '25)

- Led and **mentored 50+ contributors** each year across multiple open-source AI projects.
- Provided technical guidance on AI, ML, and full-stack integrations, ensuring high-quality and scalable contributions.
- Successfully **merged over 300+ pull requests** throughout three consecutive editions (2023–2025).
- Recognized among the top-performing projects lead to consistent community engagement and impactful project outcomes.

Project Admin – GSSoC & JWOC (2023 & 2024)

- Supervised contributors **reviewed and merged 300+ PRs** across AI and automation-based projects.
- Mentored multiple teams in implementing clean, maintainable code and robust AI-driven systems.
- Fostered a collaborative learning environment and streamlined contributor onboarding and review workflows.
